Features

- Robust build allows high or low pressure measurement in high and low temperature environments.
  : high pressure (0 to 60MPa), low pressure (0 to 2 MPa)
  : temperature range (-40 to 125℃) (may vary by model)
- For diverse applications including packaging machines, heavy machinery, factories, and shipbuilding.
- Pressure measurement of any gas, liquid, or oil.
- 316L stainless steel diaphragm for high corrosion resistance.
- Compact size allows easy installation in tight or limited spaces.
- 1ms high-speed response rate.
- Analog output: Voltage (1-5 VDC), Current (DC 4-20 mA)
- Built-in reverse polarity protection circuit.
- Various connector types
  : cable type, DIN43650-A connector type, DT04-3P connector type, M12 connector type, head type.
- Available thread sizes: G3/8, G1/4, R1/2
- IP67 protection structure (IEC standard)
  (except DIN43650-A connector type: IP65)

※1: The pressure is sealed gauge pressure. The unit is sealed structure. It is based on atmospheric pressure 101.3kPa (1.013bar).
※2: G1/4 is the standard pressure port. For the other pressure ranges, G3/8, R1/2 are standard pressure ports.
※3: The option ports are sold separately. In case of large amount ordering, contact the Autonics for manufacturing the requested pressure port.
※4: Only for M12 connector type.
※5: Write the desired pressure range and it is the default of user pressure range. (select "Z" at ④Pressure range)

Troubleshooting

Error	Troubleshooting
No outputs	Check the power supply. Check the polarity (+, -) when wiring the cable. Check the connection part.
Abnormally fluctuating output	Check the power supply. Check the supplied pressure. Check the pressure line.
Out of zero point output value	Check the power supply. Check the load resistive value of current output type for a receiver is over 700Ω. (when supplying 24VDC) Check the measuring point and transmission distance. Check the line resistance is below 700Ω.

Proper Usage

- When installing the unit on pipe line, use the hexagon part of connections not to turn the unit with a pipe wrench. Do not use the unit with strong vibrations.
- The unit is manufactured with precisely. If you drop or shock the unit, it may lose the function. Please treat the unit carefully.
- Store the unit at the place without moisture, dust, and vibration.
- This product which does not have drive part at sensing part does not need to repair it. Even though inside of pressure pipe is normally clean, it needs to take maintenance once a year as below instructions.
  ① Check the broken status of outside.
  ② Check the pressure slot, cleanliness inside, and corrosion state.
  ③ Short each terminal and check the insulation resistance between the case and power. (at 500VDC, over 100MΩ)
  ④ Check zero, span adjustment and linearity by pressure standards.
- When removing a sensor for maintenance, follow the below instructions.
  ① Replace an O-ring which is used once.
  ② Be sure that diaphragm part is not damaged.
- Connect the power with the crimp terminals.
- Switch or circuit breaker should be installed nearby users for convenient control.
- Do not use the unit near the high frequency instruments (high frequency welding machine & sewing machine, large capacity SCR controller).
- The unit cannot be repaired due to disassembled structure.
- The unit is fixed with bolt and nut at the both sides of case. Do not press excessive load (approx. 300kg/cm^2), or it may cause damage to the unit.
- Do not pull the cables with over 30N of tension force.
- Tighten the cable connection part firmly not to enter water to the cable.
- Installation environment.
  ① Indoor / Outdoor
  ② Altitude max. 2,000m
  ③ Pollution degree 2
  ④ Installation category II
